APPENDIX A – ARRANGEMENT FOR FIELD INSTALLED ATTACHMENTS

Models:

E25XM, E45XM, E70XL2, J30XMT, J40XM, H25XM, H45XM, H70XM, H135XL2,
S25XM, S40XM, S70XM, S135XL2

Information included in this Appendix is for the specified ITA class truck carriage.

- Must include **SPED Option Number** and **Order Dimension** identifying the attachment.
- These items are for Factory Installed field nameplates only!
- **These items are not options to order the attachment itself.**

Dealers and National Account offices may request a nameplate with new orders or order change notices that will include field-installed attachments. These nameplates will be installed on the trucks at the factory.

PROCEDURES FOR ORDERING THE ATTACHMENT NAMEPLATES.

1. All new truck orders to receive a factory installed field nameplate must also include the SPED nameplate option and dimension from the SPED Price List Appendix. See Index below.
2. All order changes adding a SPED nameplate option must be submitted within 10 calendar days of the original unit order.
3. The SPED nameplate option cannot be added to orders that are less than 30 days from estimated ship date on the acknowledgment.
4. Changes in attachment specifications must be submitted with an order change to delete the existing SPED nameplate option and an order change to add the new SPED nameplate option.
5. Only one SPED nameplate option is allowed per unit.
6. Nameplates for field units will continue to be available via the “Dealer Nameplate Request Form”.

EFFECTIVE:08/01/01

OR CONTACT APPLICATIONS ENGINEERING.

HYSTER COMPANY SPED PRICE LIST APPLICATIONS ENGINEERING DEPARTMENT	Arrangement for Field Installed Attachments APPENDIX A
---	---

SPECIAL NAMEPLATE OPTIONS

202-01 - Arrange for Field Installation of Unlisted Attachment

Option **202-01** is a NO CHARGE option that is added to an order when the dealer is going to field install an attachment for which a SPED option number does not already exist. It results in production of the truck with a capacity plate reflecting the attachment, and eliminates the need for the dealer to request a replacement nameplate for field installation.

Most Cascade attachments, and common attachments from other suppliers, have been assigned SPED option numbers which result in factory installed nameplates reflecting future installation of that attachment. A list of all “arrange for attachment” options is listed on the following pages of this Appendix A.

To receive a truck with an “arrange for” nameplate that reflects the installation of an attachment NOT listed in Appendix A, Option **202-01** must be included as an option on the order.

In addition to Option **202-01**, the following information MUST also be specified in the “Comments” section of the order:

- Attachment Manufacturer’s Name
- Identifying Attachment Model Number (not the serial number)
- ITA Carriage Class of the Attachment
- Attachment Capacity (in Pounds)
- Attachment Weight (in Pounds)
- Defined Horizontal Center of Gravity (HCG) of the Attachment
- Defined Vertical Center of Gravity (VCG) of the Attachment
- Lost Load Center (LLC) of the Attachment
[some Manufacturers may list this as Effective Thickness (ET)]

202-02 - Request Special Nameplate

Option **202-02** is a NO CHARGE option that is added to an order when the dealer wants non-standard information on the nameplate and will not be field installing an attachment.

You might use Option **202-02**, for example, if you want

- a. Capacities for three load centers on one plate
- b. A rating for an electric truck with a specific battery weight
- c. A rating at a specific lift height less than the maximum fork height of the mast

To receive a truck with a special nameplate, Option **202-02** must be included as an option on the truck order. In addition, clearly specify the special information you wish to appear on the nameplate in the “comments” section of the order.

For the examples above, the comments might read

- a. “Request rating at 24”, 36” and 48” LC at MFH”
- b. “Request rating with 19-85C-23 battery weighing 4150#”
- c. “Request capacity at 24” LC to 200” fork height and at maximum height (MFH)”
