

HOW **CLEAN** IS YOUR HYDRAULIC SYSTEM?

Reduce unscheduled downtime and extend hydraulic system component life in your lift truck through our mobile filtration program. By having your lift truck's hydraulic fluid filtered properly you can significantly reduce the amount of contamination in the hydraulic system without going through the expense of complete hydraulic system flushes.

Hydraulic oil contamination can adversely affect many major components of your lift truck and lead to costly repairs...

■ Steering Cylinder

- Replacement Cost \$ _____
- Rebuild Cost \$ _____

■ Hydraulic pump

- Replacement Cost \$ _____

■ Hoist cylinder

- Replacement Cost \$ _____
- Rebuild Cost \$ _____

■ Control valve

- Replacement Cost \$ _____
- Rebuild Cost \$ _____

Costs are based on local pricing as of

Additionally, contamination can reduce hydraulic system performance and lead to unscheduled and excessive lift truck downtime.

In an industry survey that was performed, 37% of lift trucks tested revealed hydraulic contamination exceeded OEM specifications. Anytime a hydraulic system hose, fitting or other component is replaced there is potential of contamination entering the system.

The benefits of this filtration program is that it results in longer hydraulic component life, reduced down time, and reduced maintenance expenses due to contamination.
