Subject: Non-Factory Supplied Forks

If forks with non-standard fork thickness are purchased from an outside vendor, the following dimensions need to be kept. The dimension from center of fork pin to the front face of the fork shank should be no less than 60mm. A 175mm long backing plate should also be added to the back of the fork shank. The top of the plate should be 550mm down from the center of the fork pin. The backing plate width should be the same width as the vendor's fork. The thickness of the backing plate should be the difference between the standard fork thickness and the vendor supplied fork thickness. See drawing below.
