WALKIE FORK-DOUBLE PALLET

Walkie Fork-Double Pallet (Short Wheelbase Forks)

Note: all double pallet walkie forks are designed with extended or "alligator" tips to handle two pallets, each pallet to a length equaling one half of the overall fork length. Example: A 96" long double pallet walkie fork is designed to handle two 48" long pallets. This is done to ensure correct location of the load wheels through the first opening of the second pallet. With this tip design, any increase in truck wheelbase and outside turning radius is minimized.

Width Across	Width Each	Length

WALKIE FORK-SINGLE PALLET

Walkie Fork-Single Pallet (Long Wheelbase Forks)

- Notes:
1. Price list poly drive tire required for forks 66" or greater.
 2. All single pallet walkie forks are equipped with the standard tip of 8.0" from tip of fork to center of load wheel in lowered position. With this tip length, the fork is designed to handle a pallet of the same length as the fork length. With this tip length, the truck wheelbase and outside turning radius are changed relative to the fork length.
